

INTERNSHIP GUIDELINES

Master Degree Course “ECONOMICS AND DATA ANALYSIS” (EDA)

effective from a.y. 2025/2026

*Last update:
Jan. 9th, 2026 (DT,RP,SF)*

INFORMATION

An internship is a **formative** short-term **work experience** that offers a meaningful and **practical** involvement linked to a student's field of study.

This professional learning experience is offered to university students by companies, institutions or other organizations outside the university, in Italy or abroad.

Internship types:

EDA students can choose between **two** internship **types**: curricular and extra-curricular.

1. **Curricular** internship. It is addressed to EDA students who:
 - a) have entered an internship activity in their **study plan** and have earned at least **24** university **credits** (cfu)
 - b) intend to carry out an internship linked to their master degree **thesis** project.

Features & duration

- the curricular internship lasts **150 hours**.
 - *only internships linked to the master degree thesis can last more than 150 hours: the maximum duration is 600 hours (extensions included);*
- students acquire **6 credits** for a 150-hour internship;
- it takes place at a **host** institution, according to a training project;
- it is not necessarily linked to the academic calendar.

2. **Extra-curricular** internships. It is addressed to:

- a) EDA students who cannot link the internship to university credits due to their study plan (internship is not included in it).
- b) EDA **graduates**, within 12 months from the graduation.

Features & duration

- the extra-curricular internship lasts **2 to 12 months** (extensions included);
- it is not linked to the study plan and it does **not** provide any university **credit**;
- it requires a state of **unemployment** (Article 19 of Legislative Decree 150/2015).

Involved figures

Intern	Company Tutor	Academic Tutor	Academic Supervisor	Internship office
<i>Student interested in an internship activity</i>	<i>Intern contact person in the company where the internship takes place. There should be an active internship agreement with the University</i>	<i>For information and logistic support to the intern</i>	<i>Professor of the University (or thesis supervisor) responsible for the prior approval of the project and for the validation of the final internship report</i>	<i>For technical information and University/ regional regulations</i>

STEPS

1) Preliminary phase

- a) Interested students are invited to carefully read this document and the UniBG internship **guidelines** ("[Regolamento di Ateneo per tirocini curriculari, extracurriculari e professionalizzanti](#)").

More **news/information** are available at the following link:
<https://en.unibg.it/study/attendance/internships>.

- b) The student is required to coordinate with the host company/organisation in advance about the timing and modalities of the internship.

2) Choice and activation

- a) The student looks for internship **opportunities**:
- evaluating available positions here: <http://sportello.unibg.it/esse3/Home.do> (Menu/Internships and Opportunities);
 - through personal contacts (to be assessed, beforehand, with the academic tutor or the supervisor);
 - internship opportunities reserved to EDA students are available on the [EDA Internship Moodle page](#): companies that expressed their willingness to welcome EDA students are listed (with their University reference persons);
 - contacting the academic tutor (rosa.pirozzi@guest.unibg.it) or the supervisor (daniele.toninelli@unibg.it).
- b) The student **gets in touch** with the company/organization and defines timing and implementation of the internship.
- c) If the company/organization does not have an **agreement** with the University, it must register through the [ESSE3](#) Internet desk, filling in the agreement form on the basis of the instructions published on the "Internship" web page.
- Supporting video tutorials are available here: <https://www.unibg.it/terza-missione/collaborazioni-enti-e-imprese/tirocinio>.
- d) The student defines the internship **project** in detail with the company tutor and discusses it with the supervisor (or with the thesis supervisor, in the case of a curricular internship aimed at writing a thesis and without CFUs).
- If the internship is linked to a thesis, the student should include this in the internship project, including the thesis among the internship project objectives.
- e) The company/organization **enters** all the details concerning the internship project on the [ESSE3](#) help desk, also providing the student ID (matricola).
- Guide to fill the form: https://dse.unibg.it/sites/dip8/files/tirocini_istruzioniinserimentoprogetto_dse.pdf.
- f) By accessing the [ESSE3](#) help desk, the student:
- checks the information and the content of the internship project;
 - enters the name of the supervisor;
 - **confirms** the internship project.

- g) The supervisor receives an automatic request of approval and officially **approves** the project; afterwards, the Internship office approve the project (usually within one week from the supervisor's approval).
- h) Before starting the internship (or in its very first phases), the student has to carry out general security **training activities** (lasting 4 hours) made available by the University and specific training activities proposed by the company/organization (they are of variable durations, depending upon the degree of risk of the job carried out)¹.

Note: *It is not necessary anymore to provide the paper version of the project.*

3) Carrying out

The student is responsible for periodically updating the internship book, detailing the activities carried out and the respective dates/timetables.

The student periodically meets the company tutor and the academic tutor (during the office hours) or with the supervisor (in the case of a curricular work placement without CFUs linked to the writing of a thesis) for a periodic evaluation of the experience, as defined in the project.

4) Closing

- a) The student meets the company tutor for filling (and signing) the **internship book** (including the **final reports**).
- b) The student sends to the supervisor the documentation (internship book and reports included within it), in order to get the **final approval**.
- c) The student, through the student helpdesk, **delivers** the final documentation to the Internship Office within two months from the end of the internship.

Important notes:

- **Previous activities or work experiences** and **usual activities** carried on at one's own workplace **cannot** be considered valid and/or recognized as internship activities nor they can provide university credits.
- Notes for students with an internship **linked to the** master degree **thesis**:

¹ If the general training course had already been carried out by the student in relation to a previous experience, the intern is simply required to communicate (and demonstrate) the completion of this activity to the Internship Office.

- *The thesis must not merely be the description of the activities carried out, but it needs to be enriched with theoretical/descriptive aspects of the field in which the internship experience took place.*
- *The thesis supervisor can ask for additions necessary to give to the student's thesis the right form and substance.*
- *The personal contribution of the student should be highlighted.*
- *The thesis supervisor, who is also the internship Supervisor, evaluates the originality and the scientific validity of the thesis.*

CONTACTS & LINKS

Reference persons

For any doubt, please contact the following persons in the Department of Economics, according to their specific competences:

- **Academic tutor:** **Rosa Pirozzi**

- For general information on internship activities, for support in finding a host company/organization, for regular reports on internship activities, ...;
